

# AQUASCOPE 3

DIGITAL ACOUSTIC LEAK LOCATOR

## Digital Ground Microphone & Listening Stick

The Aquascope 3 Ground Microphone has superior clear sound quality using digital technology which has almost eliminated the background static noise. This significant reduction in background static noise has made it easier for new operators to become good leak finders.

This Ground Microphone has minimum noise profiling and a memory function that displays the minimum noise levels for each of the last eight soundings, making it easy to determine if you are getting closer or further from the leak.

The combination of the superior sound quality, simple and intuitive operation, minimum noise profiling and user selectable filters to suppress back ground noises make this Ground Microphone the obvious choice for the professional leak finder.
